

# FARM SAFETY

*What do we need to consider?*

**Understanding livestock behaviour** and being vigilant when handling animals can help prevent serious injuries and fatalities.

**Following all rules and regulations** regarding the use, storage and handing of chemicals on the farm is extremely important.

**Knowing the safety risks** of all farm machinery such as vehicles, augers and post hole diggers is essential prior to their operation.

**Locating underground cables** before digging and being aware of overhead powerlines when operating machinery can save lives.

**Designing workshops** with consideration of noise, ventilation, lighting, storage and layout can considerably minimise safety risks.

**Recognising mental health issues** and understanding where to seek support is essential for individuals and community members.
